INTUITIVE ORGANIZATION

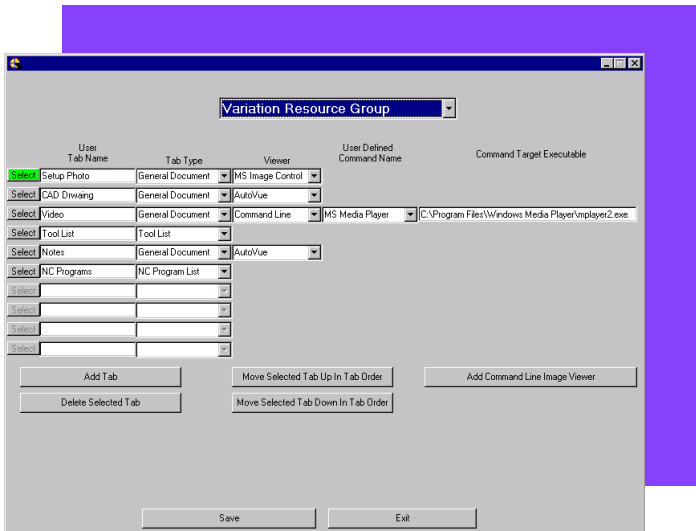

Doc\*Control provides a natural, intuitive way to organize, view, maintain, and control all of your production documents.

Based on Assemblies, Parts, and Operations, Doc\*Control lets Engineers, NC Programmers, Production Supervisors, and Shop Floor personnel view and maintain all of the documents associated with a particular job.

Each document has associated revision levels, dates and notes. Security features insure only designated personnel can maintain and edit the documents. All other personnel are limited to "View Only" mode.

## USER DEFINED FOLDER TABS

Doc\*Control is designed in a way that lets management decide how documents are to be presented and viewed. Tab Names and Tab Presentation Order can also be specified during set-up.

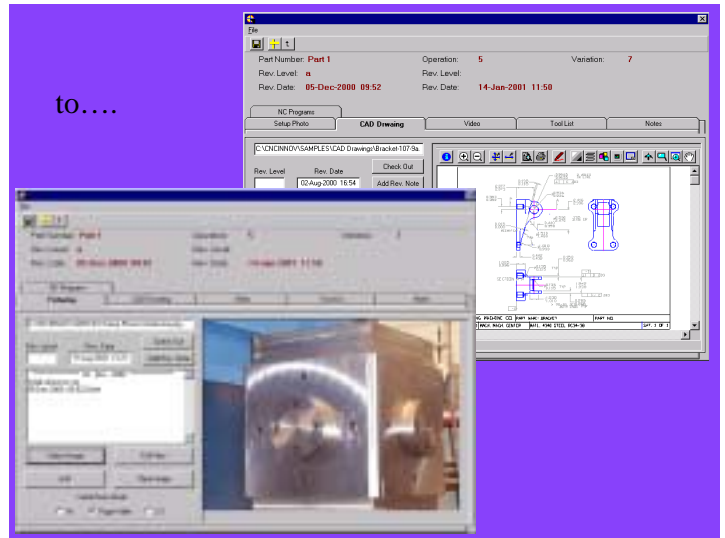

View documents with Doc\*Control's built-in image viewers or specify a command line call to any third-party viewer application.

## DOCUMENT CHECKOUT/CHECK-IN

When a document is under revision, the checkout feature lets others attempting to access the document know that it is being revised. Checkout information includes when it was checked out, the name of the person performing the revision and the nature of the revision. Once the revision is completed, the check-in feature can be used to replace the original document with the new one and increment the revision date and level.

## SUPPORTED FILE TYPES

Documents associated with production can be easily accessed and viewed in the engineering department or on the shop floor. Possibilities range from CAD drawings....

...digital photographs and AVI files to spreadsheets and word processing documents.

## EASY TO INSTALL AND USE

Quick setup options and a user friendly design means minimal installation and training time. In most situations Doc\*Control can be installed in the morning and used that same afternoon.

Contact CNC Engineering, Inc. of Enfield, CT to learn how you can get immediate control of all your production documents with our newest shop floor software product, Doc\*Control.
